

FitPot — Design Specification

Put money behind your fitness goals.

A fitness-staking and gamification platform for the Nigerian market. Users stake real money (Naira) into fitness challenges, connect verified health data (Apple Health / Health Connect), and win from the prize pool based on objective performance — not chance.

1. Design Thesis

FitPot sits at the intersection of three worlds people already trust: **fintech (wallets, payouts), fitness tracking (steps, distance, calories), and competitive sport (leaderboards, ranks, prizes)**. The visual language should borrow confidently from all three — the precision of a banking app, the energy of a fitness tracker, and the drama of a leaderboard/scoreboard — without tipping into the "betting app" aesthetic. Every screen must visibly justify itself with **verified, objective data**, because trust is the product's real currency.

Signature element: A live "**Pot Meter**" — a circular/radial gauge that simultaneously shows (a) the growing Naira prize pool and (b) the user's progress toward the challenge goal, fusing money and movement into a single visual object. It appears on the landing page hero, the challenge card, and the challenge detail screen, and becomes the app's recognizable mark.

2. Token System

2.1 Color — "Vault & Vitals"

A dark, secure "vault" base (so money feels safe) punctuated by one electric, kinetic accent (so movement feels alive).

Token	Hex	Use
--ink-950	 #0B0F0D	App background, hero background
--vault-900	 #11201B	Card surfaces, nav bars
--vault-700	 #1C342B	Elevated cards, borders, dividers
--mint-500 (signature accent)	 #38F2A0	Primary CTA, progress fills, "live" data, money-in-motion
--gold-400	 #F2C84B	Prize pool figures, 1st place, Naira amounts
--paper-50	 #F6F5EF	Primary text on dark, light-mode surface
--ash-400	 #8FA39C	Secondary/meta text, timestamps, captions
--alert-500	 #FF5C5C	Anti-cheat flags, errors, withdrawals

Rationale: Naira-green doubles as both "fitness/go" and "money/growth" — a deliberate pun rather than a generic green. Gold is reserved exclusively for currency and rank, so the eye learns "gold = stakes," never decorative.

2.2 Typography

- **Display — "Stagger":** A condensed, high-tension grotesque (e.g. *Archivo Expanded* / *Inter Tight* condensed cut) for big numbers — step counts, Naira totals, countdown timers. Tabular figures only, so a leaderboard never visually jitters as numbers update.
- **Body — *General Sans* or *Inter*:** for all UI copy, descriptions, rules text. Neutral, legible, never competes with the data.
- **Utility/Data — *JetBrains Mono* or *IBM Plex Mono*** at small sizes for IDs, transaction hashes, trust-score readouts, timestamps — reinforces "this is verifiable, logged, auditable," not just decorative branding.

Type scale (rem, base 16px): 3.5 / 2.25 / 1.5 / 1.125 / 1 / 0.8125. Display numbers (pool totals, step counts) always set in Stagger at 2.25rem+ with tight tracking; everything else in body/utility.

2.3 Layout Concept

- **Landing page:** single-column narrative scroll, broken by one full-bleed "Pot Meter" hero and a horizontally-scrolling challenge-card strip (mirrors how challenge browsing will feel in-app).
- **App:** bottom-tab structure (Home / Challenges / Leaderboard / Wallet / Profile), card-based, generous corner radius (16px) to soften the "fintech seriousness" against the "fitness energy."

3. Landing Page Specification

3.1 Structure & Section Intent

1. **Nav** — logo, "How it works," "Challenges," "Trust & Anti-Cheat," Log in, primary CTA "Get the App."
2. **Hero** — headline + Pot Meter signature element showing a real, live-feeling example challenge (¥96,000 pool, 48/50 joined, countdown). Sub-copy: *"Step Challenges. Real money. No guessing — your phone's health data settles it."*
3. **How It Works** — 4 numbered steps (this is a real sequence, so numbering is justified): Sign up → Connect Health Data → Join a Pool → Get Paid Automatically. Each paired with a small device-mock illustration.
4. **Challenge Types strip** — horizontally scrollable cards: Steps, Distance, Active Minutes, Calories — each with its metric and an example stake/pool, echoing the in-app browse screen.
5. **Race Mode vs Goal Mode** — two-column comparison. Goal Mode positioned as the flagship/recommended mode ("Everyone who hits the target shares the pool") since it's the strategic differentiator called out in the brief.
6. **Trust & Anti-Cheat** — addresses the legal/gambling-perception risk head-on: device-verified data only, impossible-step flagging, trust score. Written in plain, confident language — this section exists to convert skeptics, not impress them.
7. **Tiered Pools** — Bronze/Silver/Gold/Platinum entry tiers shown as a simple stepped bar, so different risk appetites feel legible at a glance.
8. **Social proof / leaderboard teaser** — live-style leaderboard snippet (Rank, User, Steps) to make the competitive hook tangible.
9. **Revenue transparency (optional, light footer mention)** — "We take 10% to keep the lights on. The rest is yours to win."
10. **Footer CTA** — app store badges, FAQ link, legal/responsible-play note.

3.2 Copy Voice

Plain, declarative, slightly competitive — like a coach, not a casino. CTAs name the action exactly: "Join a Challenge," "Connect Health Data," "Withdraw Winnings" — never "Get Started" or "Submit." Empty/error states (e.g., no challenges joined yet) should invite action: *"No active challenges yet. Pick one below and put your steps where your money is."*

3.3 Motion

One orchestrated load sequence: Pot Meter fills from 0 → current pool value on page load (under 800ms, eased), numbers in the meter increment with tabular-figure roll. Elsewhere: restrained — hover states only on cards, no scroll-jacking. Respect `prefers-reduced-motion`.

4. App Design Specification

4.1 Information Architecture (Bottom Tabs)

Home · Challenges · Leaderboard · Wallet · Profile

4.2 Key Screens

Home

- Greeting + Trust Score chip (mono font, small, top-right — quietly always visible to reinforce "you're verified")
- "Your Active Challenges" — Pot Meter cards (progress ring + live pool value)
- "Recommended for You" — horizontal challenge browse

Browse Challenges

- Filter chips: Steps / Distance / Active Minutes / Calories, and Public/Private, and Tier (Bronze-Platinum)
- Challenge card: Name, Objective, Entry Fee, Participants (x/max as a filled dot-bar, not just text), Duration, Prize Pool (gold, mono tabular figures)

Challenge Detail

- Header: Pot Meter (radial), Goal Mode vs Race Mode badge
- Rules (plain language, scannable bullets — not legal text)
- Participants list with verification badge (small lock/check icon = device-verified)
- Prize distribution bar (visual split: 1st/2nd/3rd/4th-10th as proportioned segments, gold gradient by rank)
- Sticky bottom CTA: "Join — ₦2,000"

Leaderboard

- Rank / Avatar+Name / Score (steps, tabular mono) / Trust badge
- Top 3 visually elevated (subtle gold/silver/bronze underline, not heavy medals/skeuomorphism)
- "You" row pinned/highlighted if not in top visible range

Wallet

- Balance (large, Stagger display), Deposit / Withdraw buttons (named exactly, no "Submit")
- Transaction list in mono utility type with status chips (Pending / Settled / Flagged)

Profile

- Stats, Streak badges (7-Day, 30-Day, 100K Steps) as small enamel-pin-style icons — the one place a little visual playfulness is allowed
- Challenge history
- Health source connection status (Apple Health / Health Connect) — always visible, since this is the trust backbone of the product

4.3 Anti-Cheat Visual Language

Trust isn't hidden in settings — it's a visible design layer:

- A small **Trust Score** indicator persists in the header across Home, Leaderboard, and Profile.
- Flagged entries (e.g., impossible step spikes) show a calm but clear `--alert-500` badge with plain explanation: *"Step spike flagged for review — your rank is on hold until verified."* Never accusatory, always procedural.

4.4 Components Checklist

- Pot Meter (radial progress + currency, signature component, 3 sizes: hero/card/detail)
 - Challenge Card
 - Leaderboard Row
 - Tier Badge (Bronze/Silver/Gold/Platinum — color-coded, consistent across app & landing page)
 - Prize Distribution Bar
 - Trust Score Chip
 - Streak Badge (pin-style)
 - Transaction Row
-

5. Accessibility & Quality Floor

- Color contrast: body text on `--ink-950`/`--vault-900` meets WCAG AA; never rely on `--mint-500` alone to convey status — pair with icon/label.
 - All radial/progress visuals have a text equivalent (e.g., "72% to goal," not just the ring).
 - Visible keyboard focus states on all interactive cards and buttons.
 - Reduced-motion variant: Pot Meter fill becomes an instant state with no animated count-up.
 - Responsive: card-based layouts collapse to single-column under 480px; bottom tab bar is the persistent mobile nav.
-

6. MVP Build Scope (Design Priority Order)

1. Landing page: Hero (Pot Meter), How It Works, Challenge Types, Trust & Anti-Cheat
2. App: Onboarding (Sign up → Connect Health Data), Browse Challenges, Challenge Detail + Join flow, Leaderboard
3. Wallet (Deposit/Withdraw/Winnings)
4. Profile + Streak Badges
5. Defer: Sponsored Challenge branding, Premium Subscription screens, Team Leagues — Phase 2
